

## 1. Describe Your UI Lab Project

### Answer:

My project is a **UI/UX prototype designed in Figma**. It focuses on creating a user-friendly interface. The project includes user research, user personas, wireframes, prototypes, navigation flow, and usability testing. The goal is to provide a simple and efficient user experience.

---

## 2. What is UI?

### Answer:

UI (User Interface) is the visual part of a system through which users interact with an application.

Examples:

- Buttons
  - Menus
  - Icons
  - Forms
  - Colors
- 

## 3. What is UX?

### Answer:

UX (User Experience) refers to the overall experience and satisfaction of a user while using a product.

Example:

A website may look beautiful (UI) but if it is difficult to use, the UX is poor.

---

## 4. Difference Between UI and UX

| UI                      | UX                   |
|-------------------------|----------------------|
| User Interface          | User Experience      |
| Focuses on appearance   | Focuses on usability |
| Colors, buttons, layout | User satisfaction    |
| Visual design           | Overall experience   |

---

## 5. What is a Wireframe?

### Answer:

A wireframe is a basic blueprint or skeleton of a website or application showing the placement of elements without colors and graphics.

Purpose:

- Plan layout
  - Define structure
  - Save development time
- 

## 6. Types of Wireframes

### **Low-Fidelity Wireframe**

Simple sketches.

### **Mid-Fidelity Wireframe**

More detailed layout.

### **High-Fidelity Wireframe**

Looks similar to the final product.

---

## **7. What is a Prototype?**

### **Answer:**

A prototype is an interactive model of a system that demonstrates how the final product will work.

Purpose:

- Testing
  - Feedback collection
  - Requirement validation
- 

## **8. Types of Prototype**

### **Based on Fidelity**

1. Low Fidelity Prototype
2. Medium Fidelity Prototype
3. High Fidelity Prototype

### **Based on Scope**

1. Horizontal Prototype
  2. Vertical Prototype
- 

## **9. Difference Between Low Fidelity and High Fidelity Prototype**

| <b>Low Fidelity</b> | <b>High Fidelity</b> |
|---------------------|----------------------|
| Basic sketch        | Detailed design      |
| Fast to create      | Takes more time      |
| No interaction      | Interactive          |
| Early stage         | Final stage          |

---

## **10. What is Horizontal Prototype?**

### **Answer:**

A horizontal prototype shows many features of the system but without detailed functionality.

Example:

A prototype showing all pages of an e-commerce website.

---

## **11. What is Vertical Prototype?**

**Answer:**

A vertical prototype focuses deeply on one feature and implements it completely.

Example:

Complete payment module of an e-commerce website.

---

**12. Difference Between Horizontal and Vertical Prototype**

| <b>Horizontal</b>           | <b>Vertical</b>                |
|-----------------------------|--------------------------------|
| Broad coverage              | Deep coverage                  |
| Many screens                | One feature                    |
| Less functionality          | Full functionality             |
| Used for navigation testing | Used for functionality testing |

---

**13. What is Usability?****Answer:**

Usability measures how easily users can use a system to achieve their goals.

---

**14. Factors of Usability****Learnability**

Easy to learn.

**Efficiency**

Fast to use.

**Memorability**

Easy to remember.

**Error Handling**

Users can recover from mistakes.

**Satisfaction**

Pleasant user experience.

---

**15. What are the Objectives of Usability?****Answer:**

- Easy to learn
  - Easy to use
  - Reduce errors
  - Increase productivity
  - Improve user satisfaction
- 

**16. What is User Persona?****Answer:**

A user persona is a fictional representation of the target user based on research.

Includes:

- Name

- Age
  - Occupation
  - Goals
  - Problems
- 

## **17. Why Do We Need User Persona?**

### **Answer:**

- Understand users
  - Design according to user needs
  - Improve user experience
  - Better decision making
- 

## **18. What is Scenario?**

### **Answer:**

A scenario is a story describing how a user interacts with a system to complete a task.

---

## **19. What is Storyboard?**

### **Answer:**

A storyboard is a visual representation of a user's journey through a sequence of images or sketches.

---

## **20. Objective of Storyboard**

### **Answer:**

- Visualize user journey
  - Understand interactions
  - Identify problems
  - Improve design
- 

## **21. What is Navigation?**

### **Answer:**

Navigation helps users move from one page or section to another.

Examples:

- Menu
  - Sidebar
  - Navigation Bar
- 

## **22. What is Navigation Journey?**

### **Answer:**

The path followed by a user while moving through different screens to complete a task.

Example:

Home → Product → Cart → Payment

---

### 23. What is Customer Journey Map?

#### Answer:

A customer journey map visually represents all interactions a user has with a product or service.

Stages:

- Awareness
- Consideration
- Purchase
- Usage
- Feedback

---

### 24. What is Process Modeling?

#### Answer:

Process modeling is the graphical representation of steps involved in completing a task.

Purpose:

- Understand workflow
- Improve efficiency

---

### 25. What is Task Model?

#### Answer:

A task model describes activities a user performs to achieve a goal.

Example:

Login → Search Product → Add to Cart → Checkout

---

### 26. What is Site Map?

#### Answer:

A site map is a hierarchical structure showing all pages of a website.

Example:

Home

---

### 27. What is Domain Analysis?

#### Answer:

Domain analysis studies the environment and requirements of a particular application area.

Example:

Banking, Healthcare, Education.

---

### 28. What is User Analysis?

**Answer:**

User analysis identifies user needs, goals, skills, and behavior.

---

**29. What is Contextual Inquiry?**

**Answer:**

A research method where designers observe users in their real working environment.

---

**30. What is Requirement Gathering?**

**Answer:**

The process of collecting user and business requirements before designing the system.

---

**31. Explain UI Lifecycle**

**Answer:**

**1. Requirement Gathering**

Understand user needs.

**2. Analysis**

Analyze users and tasks.

**3. Design**

Create wireframes and prototypes.

**4. Implementation**

Develop the interface.

**5. Testing**

Perform usability testing.

**6. Maintenance**

Improve the system continuously.

---

**32. Explain UI/UX Lifecycle**

**Answer:**

Research → Analysis → Design → Prototype → Testing → Development → Maintenance

---

**33. What is Figma?**

**Answer:**

Figma is a cloud-based UI/UX design tool used for wireframing, prototyping, collaboration, and interface design.

---

**34. Functionalities of Figma**

**Answer:**

- Wireframing
- Prototyping
- Team collaboration

- Auto Layout
  - Components
  - Design systems
  - Real-time editing
- 

### **35. What are Boolean Operations in Figma?**

**Answer:**

Boolean operations combine shapes.

Types:

1. Union
  2. Subtract
  3. Intersect
  4. Exclude
- 

### **36. Which Models Are Used in UI/UX?**

**Answer:**

- User Model
  - Mental Model
  - Task Model
  - Conceptual Model
  - Navigation Model
- 

### **37. What is Mental Model?**

**Answer:**

A mental model is the user's understanding or expectation of how a system should work.

---

### **38. What is Localization?**

**Answer:**

Localization means adapting a product for a specific language, region, or culture.

Example:

Changing English content into Marathi or Hindi.

---

### **39. What is Low Fidelity Prototype?**

**Answer:**

A simple rough design made using sketches or basic shapes to represent the interface.

---

### **40. Why Do We Create Prototypes?**

**Answer:**

- Get feedback
- Find errors early

- Save development cost
  - Improve design
- 

### **Most Important One-Line Viva Questions**

#### **What is UI?**

User Interface.

#### **What is UX?**

User Experience.

#### **Full Form of Figma?**

Figma is a brand name; it has no full form.

#### **What is a Wireframe?**

Blueprint of a UI.

#### **What is a Prototype?**

Working model of a product.

#### **What is User Persona?**

Fictional representation of a target user.

#### **What is Usability?**

Ease of using a system.

#### **What is Navigation?**

Movement between screens/pages.

#### **What is Storyboard?**

Visual representation of user interaction.

#### **What is Site Map?**

Structure of all pages in a website.

#### **How many units are there in UI syllabus?**

**6 Modules/Units** (as shown in your syllabus).

## **MODULE 1: UI Lifecycle**

### **Q1. What is User Interface (UI)?**

UI is the visual part of a system through which users interact with software.

### **Q2. What is UI Lifecycle?**

UI Lifecycle is the process of designing, developing, testing, and maintaining a user interface.

### **Q3. Phases of UI Lifecycle?**

1. Requirement Gathering
2. Analysis
3. Design
4. Prototyping
5. Implementation
6. Testing
7. Maintenance

### **Q4. Why is UI Lifecycle important?**

It helps create user-friendly and efficient applications.

### **Q5. What is Human Computer Interaction (HCI)?**

HCI is the study of interaction between users and computers.

---

## **MODULE 2: Requirement Gathering**

### **Q6. What is Requirement Gathering?**

Collecting user and business needs before development.

### **Q7. What are User Requirements?**

Needs and expectations of users from the system.

### **Q8. What are Business Requirements?**

Goals and objectives of the organization.

### **Q9. Methods of Requirement Gathering?**

- Interview
- Questionnaire
- Observation
- Survey
- Contextual Inquiry

### **Q10. What is Contextual Inquiry?**

Observing users in their actual working environment.

### **Q11. Why is Requirement Gathering important?**

To understand what users need before designing.

---

## **MODULE 3: Analysis**

### **Q12. What is User Analysis?**

Studying users' needs, goals, and behavior.

### **Q13. What is Task Analysis?**

Studying tasks performed by users.

### **Q14. What is Domain Analysis?**

Studying the application area like banking, education, healthcare, etc.

**Q15. What is Social Model?**

Shows interaction among users in a system.

**Q16. What is Task Model?**

Describes steps performed by users to achieve a goal.

**Q17. What is Object Model?**

Represents objects and their relationships.

**Q18. What is Contextual Analysis?**

Understanding users in their working environment.

**Q19. What is User Persona?**

A fictional representation of a target user.

**Example:**

Name: Rahul

Age: 22

Goal: Buy products online quickly

**Q20. Why do we use User Personas?**

To design according to user needs.

---

**MODULE 4: Design**

**Q21. What is Design in UI?**

Creating the structure and appearance of the interface.

**Q22. What is a Scenario?**

A story describing how a user completes a task.

**Q23. What is Storyboard?**

Visual sequence showing user interaction.

**Q24. What is Navigation?**

Movement between screens/pages.

**Q25. What is Navigation Journey?**

The path a user follows to complete a task.

**Example:**

Home → Product → Cart → Payment

**Q26. What is Site Map?**

Hierarchical structure of website pages.

**Q27. What is Mental Model?**

User's expectation of how a system should work.

**Q28. Principles of Good Design?**

- Simplicity
- Consistency
- Visibility
- Feedback
- User Control

**Q29. What is Customer Journey Map?**

Visual representation of the user's complete experience.

---

## **MODULE 5: Low Fidelity Prototype**

### **Q30. What is a Prototype?**

A working model of a product.

### **Q31. Why do we create prototypes?**

To test ideas before development.

### **Q32. What is a Low Fidelity Prototype?**

Simple sketch showing basic layout.

### **Q33. What is a Wireframe?**

Blueprint of a website or application.

### **Q34. Difference Between Wireframe and Prototype?**

#### **Wireframe Prototype**

Static            Interactive

Layout only    Working model

Early stage    Testing stage

### **Q35. Types of Wireframes?**

- Low Fidelity
- Mid Fidelity
- High Fidelity

### **Q36. Difference Between Low and High Fidelity?**

**Low Fidelity    High Fidelity**

Rough sketch    Detailed design

No colors            Colors and graphics

Less interaction    Interactive

---

## **MODULE 6: Implementation and Testing**

### **Q37. What is Implementation?**

Converting design into a working interface.

### **Q38. What is Usability Testing?**

Testing how easily users can use a system.

### **Q39. What is Usability?**

Ease of use of a product.

### **Q40. Factors of Usability?**

1. Learnability
2. Efficiency
3. Memorability
4. Error Handling
5. Satisfaction

### **Q41. Objectives of Usability?**

- Easy to learn
- Easy to use

- Reduce errors
- Improve satisfaction

**Q42. What is User-Friendly Design?**

A design that is easy to understand and use.

**Q43. What is Feedback in UI?**

Response given by the system after user action.

**Example:**

"Login Successful"

---

**FIGMA QUESTIONS (VERY IMPORTANT)**

**Q44. What is Figma?**

A cloud-based UI/UX design tool.

**Q45. Uses of Figma?**

- Wireframing
- Prototyping
- UI Design
- Team Collaboration

**Q46. What are Components in Figma?**

Reusable design elements.

**Q47. What is Auto Layout?**

Automatically arranges elements.

**Q48. What is Prototype Mode in Figma?**

Creates screen interactions and navigation.

**Q49. What are Boolean Operations in Figma?**

1. Union
2. Subtract
3. Intersect
4. Exclude

---

**VERY FREQUENT EXAMINER QUESTIONS**

**What is Wireframe?**

Blueprint of UI.

**What is Prototype?**

Working model of system.

**Difference between Horizontal and Vertical Prototype?**

**Horizontal Prototype**

- Many screens
- Less functionality

**Vertical Prototype**

- One feature
- Complete functionality

**Example of Vertical Prototype?**

Complete payment module of an e-commerce app.

**Example of Horizontal Prototype?**

All screens of an e-commerce app.

**What is Storyboard?**

Visual story of user interaction.

**What is User Persona?**

Representative user profile.

**What is Navigation?**

Moving between pages.

**What is Customer Journey Map?**

Complete user experience map.

**What is Site Map?**

Structure of website pages.

**What is Usability?**

Ease of use.

**What is UI?**

User Interface.

**What is UX?**

User Experience.

---

**Project Viva (Almost Guaranteed)****What is your project?**

"My project is a UI/UX prototype designed in Figma. I first gathered requirements, created user personas, designed wireframes, developed prototypes, created navigation flow, and performed usability testing to ensure a user-friendly experience."

**Why did you choose this project?**

"To solve user problems and provide a simple, efficient, and attractive interface."

**Which tool did you use?**

"Figma."

**What artifacts did you create?**

- User Persona
- Scenario
- Storyboard
- Site Map
- Wireframe
- Prototype
- Navigation Flow
